Hiring Manager
American Express
Bengaluru, Karnataka, India

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer I position at American Express within the Enterprise Logging Framework (ELF) team. I recently completed my Integrated M.Sc. in Mathematics and Computing from IIT Kharagpur and am excited about the opportunity to contribute to large-scale observability systems and distributed platforms.

Through my experience as a Founding Engineer at DubFlix, I worked on building fault-tolerant and highly available AWS-based systems processing high-volume workloads across multiple languages. I designed and optimized microservices, improved system performance through asynchronous processing, and worked with cloud technologies to deliver scalable and reliable production systems.

Additionally, I built a CI/CD Observability and Log Correlation Pipeline project where I developed a log aggregation system using Node.js and GitHub Actions that captured build failures and generated root-cause diagnoses with low latency. I also implemented PostgreSQL with pgvector for semantic incident retrieval and built a real-time React monitoring dashboard. This experience closely aligns with the goals of the ELF team in logging, tracing, observability, and troubleshooting large-scale systems.

My background in distributed systems, data structures and algorithms, scripting, cloud technologies, and backend development, along with strong problem-solving skills through competitive programming, has prepared me to contribute effectively while continuing to learn and grow.

I am excited by American Express's culture of innovation and collaboration and would welcome the opportunity to discuss how my technical experience and enthusiasm can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Aman Kumar
